

Ink Consumables & Yields

Ink Cartridges

Utilized in Mint low and mid-volume mailing systems. Print heads are built into the cartridge and are not a separate consumable item. Maximum ink yield (# of imprints per cartridge) varies by mailing system model.

Understanding Ink Yields

- Ink yields will vary, even for customers with the exact same Formax Mint Mailing System model
- Factors that influence ink yield include volume, batch sizes, number of times mail is processed per day, slogan/text printing, and environmental conditions
- A customer who processes many batches of mail at different times throughout the day will see a lower yield from the ink cartridge/tank than a customer who meters their outbound mail just once or twice per day
- Most customers will see cartridge yields in the approximate range shown in the chart.

| Model # | Max Ink Yield* |
|-----------------|----------------|
| Mint 110 | 5,400 |
| Mint 210S | 6,050 |
| Mint 210A | 15,850 |
| Mint 310 | 26,000 |
| Mint 310 Expert | 26,000 |
