Flexibility * Performance * Accuracy * Easy of Operation

MAILMASTER C4MPACT

Flexibility * Performance * Accuracy * Easy of Operation

The **Mailmaster Compact** is a cost effective DL to C4 production envelope inserter, with a compact footprint which would fit into an office environment as well as a commercial production unit.

The Compact is a comprehensive modular enveloping system offering flexibility, durability and ease of set up.

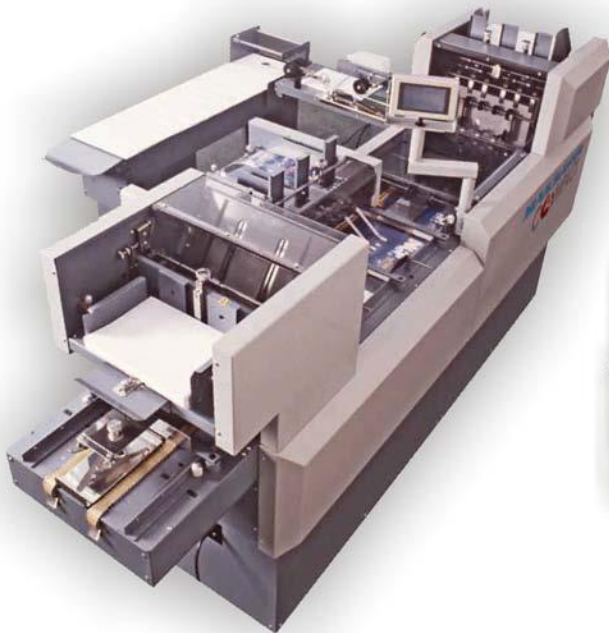

Constructed to handle large volumes, but designed for easy set up and quick changeover from one job to another to make it equally suitable for short run work.

Three automatic feeders and a handfeed position as standard.

The prime document feeder has an integral folder. Two insert stations handle a wide variety of documents including single sheets, prefolded material, reply envelopes, stitched sets, magazines and books up to 7mm thick.

FEATURES

- Up to 5,000 filled envelopes per hour
- Packing thickness up to 12mm
- Quick changeover between jobs
- Inserts into envelopes between DL and C4
- Easy changeover from one job to another
- Side insert stations feed a wide variety of material up to 7mm thick
- Multiple feeding from each feeder to a preset quantity
- Hand feed position
- Additional modular feeder
- Choice of reading technology OMR, BCR and 2D
- Pivoting touch control screen provides run information, error location and help pages
- Top load feeders for ease of filling
- Re-load without stopping the machine
- Station linking to increase loading capacity
- Sequential start-up/clear down
- Unique inserting system positively guides the inserts into the envelope
- Insert stations have miss, jam double detect and low level sensors
- Test mode for running a trial insertion

Operator control of is through a touch screen. This enables station selection and output speed, error location and further run information.
